A MEMORABLE KINDERGARTEN IN FINLAND

Introduction

In Finland, the government's commitment to education is reflected in its educational system, which is based on continuous and comprehensive education. The school is the basic educational institution in Finland, which means that the nation's educational strategy is aimed at achieving equality and excellence in education.

The park is located on the eastern part of Helsinki, Hietaniemi, which is a part of Helsinki's urban area. The park is adjacent to a busy street and is surrounded by a mixture of residential and commercial buildings.

AERIAL VIEW

The kindergarten project is located in Helsinki, Finland. After careful planning, the site selection, and the development of the master plan, the client decided on an architectural firm to design the kindergarten. The site is a former industrial site that was once home to a large factory. The factory was demolished, and the site was transformed into a park.

The kindergarten project is located in an area that is currently undergoing urban development. The area is characterized by a mix of residential and commercial buildings, and the kindergarten will be an important addition to the area.

4. KINDERGARTEN

The kindergarten building is located in Helsinki, which is a part of Helsinki's urban area. The kindergarten is located in a busy street and is surrounded by a mixture of residential and commercial buildings.

The kindergarten is located in a residential area and is part of a larger development project. The kindergarten is designed to be a welcoming space for children and their families.

During the design process of the project, the architects considered the local context and the needs of the community. The kindergarten is designed to be a flexible space that can be used by the community for various activities.

Design Concept

The design goal was influenced by the architecture of traditional houses in rural areas in South China. It was designed to achieve a high level of comfort for the users while maintaining a strong sense of identity and cultural heritage. The design elements include a central courtyard, a series of outdoor spaces, and a series of smaller courtyards to provide a sense of privacy and seclusion.

The design process involved a series of workshops and consultations with the local community to ensure that the design met the needs of the users. The design process also involved the use of traditional construction techniques, such as the use of bamboo and timber, to ensure that the building was sustainable and environmentally friendly.

The final design is a series of interconnected spaces that provide a sense of enclosure and privacy while also allowing for natural light and ventilation. The design is also intended to be flexible, allowing for future expansion and adaptation to changing needs.
A Memorable Kindergarten

The '100 Hundred' Kindergarten has been designed to accommodate 30 children in four different groups. The interior spaces are organized to create a multi-purpose hall, a classroom with a door, a shared activity room, and a small group space, each with separate entrances, windows, private spaces, and walls. The spaces are connected by bridges and corridors, allowing for flexibility in movement. The sliding doors control the flexibility of the interior and the user's access to different areas as the needs of the building change.

In the group areas, every group has its own group activity room and a small room. Each room is separated from the others by sliding doors that can be opened or closed depending on the needs of the children. This flexibility allows for different group activities, with some rooms used for art and play, others for music and movement, and still others for quiet reading or rest.

The kindergarten also includes a reading nook, a science corner, and a music area, all of which are designed to encourage learning through play. The outdoor spaces include a playground, a garden, and a outdoor learning area, providing children with opportunities to explore and interact with their environment.

The overall design of the kindergarten emphasizes natural light, with large windows and open spaces, creating a warm and welcoming atmosphere for children and teachers alike. The materials used in the construction are environmentally friendly, with focus on sustainability and energy efficiency.
- 28 x 120 mm vertical wood planks
- 30 mm air gap (horizontal wooden planks)
- 30 x 40 mm vertical wooden batten
- 12.5 mm gypsum boards
- 200 x 200 mm timber column, 200mm wood insulation in between
damp proof membrane
- 22 mm gypsum boards
- 28 mm horizontal wood planks
